1. Prerequisites

Before running the application, ensure your system has:
- Node.js (v18 or above recommended)
- npm or yarn package manager
- SQLite (for backend database; usually included with Node.js setups)

2. Clone the Repository

git clone <your-repo-url>
cd <your-project-folder>

3. Install Dependencies

Frontend

cd frontend
npm install
npm start

Backend

cd backend
npm install
npm start

4. Run the Application
